

FrontEnd -

1. Using our Bootstrap template
2. Pricing Algorithm(number of employees, features, etc)
3. Login to dashboard

Company Dashboard -

1. Company upload documents
2. User can upload documents
3. Managers set different permissions for employees
4. Company profile
5. Company payments
6. Payments history
7. Invoices system
8. Send employees invitations
9. Managers alerting system
10. Daily/weekly/monthly managers reports
11. Managers dashboard: risky mails, numbers of emails, active emails, etc

Background services -

1. Update email correspondence for each new email
2. Update all documents for every new event
3. Reducing data for all documents and correspondence

The AI -

1. Reducing data
2. Encrypting data
3. Open source module?

The Plugins -

1. Should also pop-up for Replay emails
2. Make the same for income emails - when clicking on one not-read email from inbox, first of all it will pop-up, with a close button.
3. When receiving email, read the email and send it to our server. We will replay you into the pop-up window.
4. Add menu to the main operating button:
 - A. TurnOff/ TurnOn
 - B. Exclude this address

C. Manage addresses

5. We need also to develop the same to Microsoft office

6. Need to add 3 lights of warning for each email:

A. Green light - no risk at all

B. Yellow light - medium risk, show rejections and offer a new version

C. Red light - high risk, you can't send it, need a manager approval

General -

1. Support Google and Microsoft emails

2. Multi-languages system

3. Email OTP

4. Emails notifications(marketing, support, payments, etc)
